

## Potential inconsistencies or shortcomings in the current Oslo Manual to be addressed in the new version

1.

**Can you identify one or more issues which are, in your opinion, neglected, wrongly described or not conceptually sound in the Oslo Manual 2005?**

*Please drag the bottom right corner down if you need to expand the question box*

The Oslo Manual extremely focuses on „high“ sciences. There is no definite support for the so called „adaptive development“. The development plays no role, everything is turning around R&I and not around R&D&I. Many SMEs do „adaptive development“ and the share of them is large enough to regard their activities.

**2. The comments provided above are mostly based on your experience:**

- In producing innovation statistics based on the Oslo Manual
- In reviewing and analysing innovation statistics based on the Oslo Manual
- In both types of activities

## Outdated concepts and practices still present in the Oslo Manual

3.

**Please point to any concept or practice used in the Oslo Manual 2005 that you consider to be currently outdated. Can you explain why?**

*Please drag the bottom right corner down if you need to expand the question box*

**4. The above comments are mostly based on the respondent's experience:**

- In producing innovation statistics based on the Oslo Manual
- In reviewing and analysing innovation statistics based on the Oslo Manual
- In both types of activities

## Proposals for changes to be introduced as recommendations in order to improve the data collection and reporting activity (relying on the experience gathered from past surveys)

5.

**Please outline your proposals for improving current recommendations on data collection.**

*Please drag the bottom right corner down if you need to expand the question box*

The share of SMEs is around 50-55% in the economy, therefore the inclusion of the results of R&D&I is more than required in the form of „adaptive development“.

**6. The above comments are mostly based on the respondent's experience:**

- In producing innovation statistics based on the Oslo Manual
- In reviewing and analysing innovation statistics based on the Oslo Manual
- In both types of activities

**Proposals for substantial changes to be introduced in the definition and interpretation of business innovation**

7.

**Should any of the concepts related to business innovation be revised or eliminated because they are no longer meaningful or helpful?**

*Please drag the bottom right corner down if you need to expand the question box*

**8. The above comments are mostly based on the respondent's experience:**

- In producing innovation statistics based on the Oslo Manual
- In reviewing and analysing innovation statistics based on the Oslo Manual
- In both types of activities

**New populations to be surveyed in order to measure their innovation activities**

**9. Should the scope of innovation statistics be extended beyond business enterprises (e.g. to public or non-profit institutions, individuals, etc.)? If yes, please, give some examples and explain why and how the scope of the Oslo Manual should be extended.**

*Please drag the bottom right corner down if you need to expand the question box*

Yes, sure. Some examples: universities, research and development institutions.

**10. The above comments are mostly based on the respondent's experience:**

- In producing innovation statistics based on the Oslo Manual
- In reviewing and analysing innovation statistics based on the Oslo Manual
- In both types of activities

**New topics to be covered in order to provide for a comprehensive measurement of innovation in economic and social systems**

**11. Should the implementation-based concept of innovation used in the Oslo Manual be revisited? Can you point to additional dimensions of innovation in economic systems that, in your opinion, the revised manual should address?**

*Please drag the bottom right corner down if you need to expand the question box*

**12. Above comments are mostly based on the respondent's experience:**

- In producing innovation statistics based on the Oslo Manual
- In reviewing and analysing innovation statistics based on the Oslo Manual
- In both types of activities

### Personal information

**13.**

**First Name**

Gábor

**Last Name**

Szabó

**Affiliation**

Hungarian Association for Innovation

**Country**

Hungary

**14. This questionnaire was filled in:**

- As an individual expert
- On behalf of the institution affiliated to
- On behalf of another institution, please, specify Please enter an 'other' value for this selection.

**15. Your experience with the Oslo Manual is:**

- Producer of innovation statistics
- User of innovation statistics
- Both producer and user

**16. Consent for use of information provided. Please select one of the two options below:**

- I agree for my responses to be collected and analysed by OECD and Eurostat but not for them to be publicly disclosed.
- I agree for my responses to be collected and analysed by OECD and Eurostat and for them to be publicly disclosed and attributed to me or my organisation.
